

# Celebrating **41** Years Of Service

Edward's Truck Center is the **Cummins and Perkins Industrial Engine** dealer lot for the tri-county area. We offer diesel and natural gas irrigation engines ranging from 60 to over 1200 horsepower.

## We Sell Service...

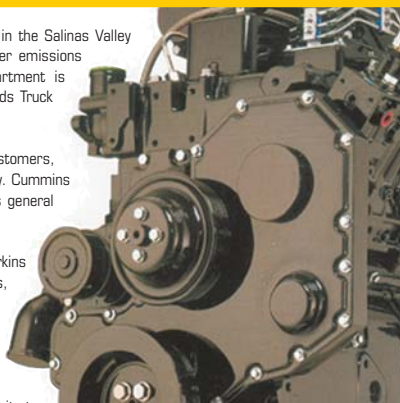

Satisfying customers is a concern of any successful company, at Edwards Truck Center it's an obsession! Being a small business, customers enjoy personalized service while at the same they get the professional service they deserve.

Edwards Truck Center has proudly served the parts and service needs of the trucking industry in the Salinas Valley since 1965. The trucking industry has gone through many changes over the years with stricter emissions standards and sophisticated onboard electronics. To insure prompt service the parts department is constantly adjusting inventory to keep up with those changes. The knowledgeable staff at Edwards Truck Center continues to be factory-trained offering customers quality service.

Adding a Volvo Truck dealer franchise in 1988 has proven to be a great asset for local customers, especially the refuse industry. Volvo Trucks has become the premier trucks on the highway today. Cummins engine and Detroit Diesel Series 60 engine customers can find their warranty needs as well as general maintenance needs met by trained technicians.

In an attempt to better serve local agricultural customers, Cummins industrial engines and Perkins industrial engines dealer agreements have been added. From selling new engine packages, providing warranty representation, supplying genuine parts or catering to your maintenance needs, the ag customer is very important. As everybody in the Salinas Valley knows, agriculture is our backbone and Edwards Truck Center is doing its part to support that industry.

Edwards Truck Center has been actively involved with the local air resource agencies. By providing the necessary link between operators and the air board, several customers have had the opportunity to replace dirty emission engines with new clean engines. Available subsidies along with expert repower assistance creates a "win-win" situation, new engines for operators and cleaner air for all of us. It's just another example of Edwards' dedication to the community.
